**LOGISTICS
(WAREHOUSING,
INVENTORY &
PROCUREMENT)**

**LOGISTICS (WAREHOUSING,
INVENTORY & PROCUREMENT)
R15 000 INCLUDING VAT**

**17
WEEKS**

Let's look at the big picture...

Overview of what you will learn

Logistics is a little bit like juggling... When the system's working properly and you're in a good rhythm, everything slots into place. But when one ball drops, the entire thing can come crashing down. The key to any effective supply chain is setting up systems that ensure a smooth process from manufacture to distribution.

Warehousing, inventory management and procurement are accepted today as critical components of logistics and supply chain operations. In this short course, you'll learn how to effectively implement strategies to ensure this "tri-factor" is working optimally. You'll discover how warehouses have become complex operations that add value to supply chains and give competitive advantages to organisations; how inventory management can lead to improvements in customer service, operational efficiency and company asset utilisation; and how procurement is a key strategic element in any supply chain process.

Coupled with a range of hands-on business practice skills from marketing and information flow, to business planning and commercial skills, this course is designed for people across the supply chain spectrum.

Upskill with the IMM Graduate School and ensure you never drop the ball again in the complex juggling act that is supply chain management.

News just in...

Get International Accreditation from CILTUK on successful completion of this short course. You'll also receive a 1-year membership to CILTSA to the value of R360.
